

CIVICPULSE BRICS — OFFICIAL VIDEO DEMO SCRIPT

Track 1: AI for Digital Public Infrastructure & Multilateral Governance Presenter Walkthrough & Click-by-Click Directing Guide (Female Presenter)

PRESENTER PRE-FLIGHT CHECKLIST (BEFORE PRESSING RECORD):

- **Active Services:** Open `http://localhost:3000` in full-screen browser (1080p/4K). Backend running on port 8000.
- **Clean Baseline:** If test records exist, click 'Clear All' in the top header to start fresh.
- **Microphone:** Enable browser microphone permission for localhost:3000.
- **Presenter Tone:** Executive, articulate, confident, tech-forward, and enthusiastic. Speak at a measured conversational pace (~135 WPM).
- **Cursor Movement:** Move cursor smoothly. Pause on key UI elements for 1.5 seconds to let viewers absorb the indicators.

SCENE 1 (0:00 - 0:32) — Hook & The Governance Problem

WHERE TO POINT & CLICK:	• Browser starts full-width on <code>http://localhost:3000</code>. • Point cursor at CivicPulse logo, then trace along the scrolling LIVE TELEMETRY ticker at the top. • Hover gently over the 4 KPI metric cards in the Problems Directory.
EXACT SPOKEN SCRIPT:	"Hello everyone! Under Track 1 — AI for Digital Public Infrastructure and Governance, we are thrilled to present CivicPulse. Across the emerging BRICS economies, municipal governments face a critical challenge: citizen feedback is deeply fragmented across hundreds of vernacular languages, audio memos, and social platforms. Life-safety infrastructure emergencies—such as broken drinking water mains, ICU hospital blackouts, or flash flood transit stoppages—too often get buried under general inquiries, causing delayed response. CivicPulse solves this. We have built an open-source Digital Public Good connecting citizens directly to policymakers through real-time multilingual speech recognition, auditable 4-factor ML severity scoring, and automated public good policy directives."
DIRECTOR NOTE / DELIVERY:	<i>Tone: Executive, clear, inspiring. Emphasize 'Digital Public Good' and 'ML severity scoring'.</i>

SCENE 2 (0:32 - 1:18) — Citizen Voice, BRICS Country & Custom Location Ingestion

WHERE TO POINT & CLICK:	• Click the neon button '[+ Report Problem]' in the top right. • In the modal, point to the BRICS Country dropdown (India selected). • Click 'Detect Current GPS' OR type 'Ward 42, Rohini Sector 16, New Delhi' into the location box. • Click the microphone OR click preset 'India — Water Pipeline Rupture (Hindi)'. • Point to the 'Live AI Inference Preview' card lighting up below the text box.
EXACT SPOKEN SCRIPT:	"Let's experience this through the eyes of a citizen. Citizens should never have to navigate complicated government portals or pre-selected location lists. In CivicPulse, they simply click 'Report Problem'. Citizens select their BRICS member nation, and they can either type their exact neighborhood street or click 'Detect Current GPS' to bind their coordinates automatically. Next, they dictate naturally in their mother tongue. Watch this: A citizen in New Delhi speaks in Hindi: 'Hamare ward mein 4 dino se main drinking water pipeline tooti hui hai aur hospital mein patients pareshan hain.' Immediately, notice our Live AI Inference Preview: it automatically transcribes the Hindi speech, routes it to our Indic transformer, classifies the sector as Water & Sanitation, and assesses a critical urgency score in real time before even hitting the database."

DIRECTOR NOTE / DELIVERY:	Tone: Dynamic and engaging. Pause for 1 second when the AI preview card lights up with detected language 'HI'.
---------------------------	--

SCENE 3 (1:18 - 1:52) — Submission, Privacy Sanitization & Persistent SQLite Storage

WHERE TO POINT & CLICK:	- Click the green button '[Submit Grievance]'. - Point to the animated green checkmark and verified digital receipt. - Click 'View on Dashboard'. - Point cursor to the 'Database: [1 Report]' counter in the top bar, then to the newly created problem card.
EXACT SPOKEN SCRIPT:	"When submitted, our FastAPI backend sanitizes the complaint for zero-knowledge privacy, runs semantic deduplication, and commits it into our persistent SQLite DBMS. The citizen immediately receives an authenticated digital tracking receipt. Returning to our dashboard, observe that our Database counter has incremented in real time. Everything you see is backed by real, persistent data. Furthermore, if dozens of nearby citizens report the same broken pipe, CivicPulse's TF-IDF cosine similarity engine automatically merges duplicate complaints within a 10-kilometer radius, incrementing a merged complaints badge to eliminate ticket fatigue."
DIRECTOR NOTE / DELIVERY:	Tone: Reassuring and authoritative. Emphasize that there is zero fake mock data.

SCENE 4 (1:52 - 2:30) — 4-Factor ML Severity Scoring & AI Architecture Blueprint

WHERE TO POINT & CLICK:	- On the problem card, point to the score 90.0 / 100 and the red [CRITICAL] badge. - Click 'View ML Model Scoring Factors'. Hover across the 4 factor boxes. - Click '[AI Architecture]' in the top header. Trace the 6 pipeline stages and the formula matrix. - Close the blueprint modal.
EXACT SPOKEN SCRIPT:	"How do policymakers know which issues require emergency capital? Through our transparent Machine Learning Severity Score out of 100. When we click 'View ML Model Scoring Factors', we see the exact mathematical vectors driving this score: Public Health & Hazard Risk (35%), Outage Duration (25%), Sector Vulnerability Weight (20%), and Disruption Intensity (20%). By clicking our 'AI Architecture' blueprint in the header, ministers can inspect our auditable 6-stage pipeline—from PII sanitization to Indic transformers and deterministic formulas—guaranteeing 100% governance transparency."
DIRECTOR NOTE / DELIVERY:	Tone: Analytical and commanding. Highlight the transparency of the mathematical model.

SCENE 5 (2:30 - 2:55) — Sector Health Matrix & Autonomous Threat Radar

WHERE TO POINT & CLICK:	- On the left sidebar, click the 2nd tab: 'Sector Health Matrix'. - Hover over the 4 SVG Radial Sector Gauges (Water, Power, Healthcare, Transport). - Point to the Autonomous Threat Radar Scanner with its rotating green sweep and hazard blips. - Trace the 24-hour ingestion velocity curve and the 10 BRICS country telemetry cards.
-------------------------	--

EXACT SPOKEN SCRIPT:	"Next, let's navigate to the Sector Health Matrix. This replaces cluttered geospatial map dots with clean institutional telemetry. Policymakers have access to dynamic radial sector gauges tracking water resilience, power stability, and hospital readiness. Beside them, our Autonomous Threat Radar sweeps continuously across BRICS coordinates, visualizing hazard clusters the moment they are reported. This gives government leaders an immediate, high-level operational picture across all member states."
DIRECTOR NOTE / DELIVERY:	<i>Tone: Visionary and impressive. Emphasize the institutional grade of the visual telemetry.</i>

SCENE 6 (2:55 - 3:20) — AI Project Directives, Interactive Fiscal Simulator & Conclusion

WHERE TO POINT & CLICK:	• Click the 3rd sidebar tab: 'AI Project Directives'. • Click 'Review Policy' on the top synthesized project card. • In the modal, click 'Interactive Fiscal Allocation' and drag the slider from 100% to 125%. • Click '[Ratify Policy Recommendation]' — point to the green COMMITTED banner. • Close modal and smile warmly into the camera for the closing line.
EXACT SPOKEN SCRIPT:	"Finally, CivicPulse bridges citizen grievances directly into capital budget deployment. In our AI Project Directives view, our clustering engine synthesizes localized complaint clusters into high-impact infrastructure initiatives. When we open 'Review Policy', policymakers can use our Interactive Fiscal Allocation Simulator to adjust funding allocations in real time, see projected citizen beneficiaries, and ratify recommendations directly into the New Development Bank queue. CivicPulse empowers BRICS nations to listen in any language, evaluate with machine learning, and act with decisive speed. Thank you!"
DIRECTOR NOTE / DELIVERY:	<i>Tone: Warm, confident, triumphant closing. Deliver the final line with poise and energy.</i>
