

CIVICPULSE — OFFICIAL VIDEO DEMO SCRIPT

Track 1: AI for Digital Public Infrastructure & Governance (BRICS Innovation Theme) Presenter Walkthrough & Click-by-Click Directing Guide

BEFORE YOU PRESS RECORD (PRE-FLIGHT CHECKLIST):

1. **Start Servers:** Ensure Frontend is open at **http://localhost:3000** and FastAPI backend is active.
2. **Clean Slate:** Click the red **'Reset / Clear All'** button in the top header so the problems table starts completely empty.
3. **Microphone & Audio:** Make sure your browser has microphone permission enabled for localhost:3000.
4. **Delivery Persona:** Professional, confident, clear, articulate, and welcoming tone. Speak at a measured, conversational pace.

SCENE 1 (0:00 - 0:30) — Hook & The Governance Problem

WHERE TO OPEN & CLICK:	• Screen starts full-width on http://localhost:3000. • Mouse cursor is idle at the center of the clean Problems Directory. • Do not click anything yet.
EXACT SPOKEN SCRIPT:	"Hello everyone. Under Track 1 — AI for Digital Public Infrastructure and Governance, we are proud to present CivicPulse. Across BRICS nations, governments struggle to consolidate citizen feedback. Critical infrastructure complaints arrive fragmented across local languages, voice notes, and messaging channels. Urgent life-safety crises—such as contaminated municipal drinking water or hospital clinic blackouts—often get buried under general feedback, leading to misaligned public spending. CivicPulse is an open-source Digital Public Good that bridges citizens directly to policymakers through real-time speech recognition, multilingual translation, semantic deduplication, and an ML-driven severity scoring model."
DIRECTOR NOTE / DELIVERY:	<i>Tone: Serious, confident, and articulate. Highlight the words 'Digital Public Good' and 'ML-driven severity score'.</i>

SCENE 2 (0:30 - 1:15) — Live Citizen Voice & Speech-to-Text Input

WHERE TO OPEN & CLICK:	• Move mouse and click the '+ Add Problem (Voice / Text)' button in the top right. • The Citizen Voice Portal modal opens. • Click on the microphone button OR click the 1st Quick Preset: '■■■ New Delhi — Water Crisis (Hindi)'. • Point mouse to the live text appearing.
------------------------	---

EXACT SPOKEN SCRIPT:	"Here in the directory, policymakers immediately see the problem summary, the verified location, and a precise ML Severity Score out of 100. This score is calculated by our custom Machine Learning Severity Scorer based on four objective feature vectors: 1. Public Health & Hazard Risk (35%): detects toxic exposure or clinic impact. 2. Outage Duration (25%): penalizes multi-day deprivation. 3. Infrastructure Vulnerability (20%): weights baseline sector criticalities. 4. Sentiment Distress (20%): quantifies emergency language intensity. This gives decision-makers an auditable, transparent mathematical rationale for prioritizing emergency interventions."
DIRECTOR NOTE / DELIVERY:	<i>Tone: Analytical and authoritative. Highlight the transparency of the ML model.</i>

SCENE 5 (2:25 - 2:55) — Embeddings & Topic Deduplication (+N Merged Reports)

WHERE TO OPEN & CLICK:	• Click '+ Add Problem' again. • Select the New Delhi hub and submit another related report (e.g. 'Drinking water pipe broken near hospital'). • Click Submit -> View on Dashboard. • Point to the badge: '+2 merged reports'.
EXACT SPOKEN SCRIPT:	"In real crises, hundreds of citizens report the exact same broken pipe or flooded street. Rather than flooding government queues with duplicate tickets, CivicPulse generates TF-IDF semantic embeddings and performs geospatial cosine similarity within a 15-kilometer radius. As you can see, the second report was semantically matched and automatically merged into the existing issue, incrementing our counter to '+2 merged reports'. Policymakers gain immediate volume intelligence without ticket fatigue."
DIRECTOR NOTE / DELIVERY:	<i>Tone: Enthusiastic. Stress how this solves a major pain point for government operations.</i>

SCENE 6 (2:55 - 3:20) — AI Project Solutions & Conclusion

WHERE TO OPEN & CLICK:	• On the left sidebar, click 'AI Project Solutions'. • The view switches to the AI Prescriptive Projects directives. • Scroll gently through the generated directive cards. • End on the clean dashboard.
EXACT SPOKEN SCRIPT:	"Finally, CivicPulse bridges citizen complaints into capital public investment. In the 'AI Project Solutions' tab, our policy engine aggregates clustered grievances into structured, actionable development directives—complete with budget estimates, deployment timelines, and policy justifications aligned with national infrastructure plans. CivicPulse empowers BRICS governments to listen in any language, evaluate through machine learning, and act with speed and transparency. Thank you!"
DIRECTOR NOTE / DELIVERY:	<i>Tone: Strong, inspiring closing. Smile and deliver with confidence.</i>
